

# Framing Basics 2

Dave Hermon  
Russ Root  
Stephen Seybold  
Stephen Capuyan

**March 2019**

# Agenda

- 🏠 Blocking – Kitchen and ADA
- 🏠 HVAC
- 🏠 Deadwood
- 🏠 Attic Access
- 🏠 Marking studs
- 🏠 Sheathing walls
- 🏠 Sheathing gables
- 🏠 Blue Board
- 🏠 Brick Ties

# Blocking (Kitchen and ADA)

## 🏠 With all Blocking

- 🏠 Verify location
- 🏠 Non-finger jointed lumber
- 🏠 Use wide side of the block so it's flush with interior face of the studs
- 🏠 Attach using 2-12d nails on each side of blocks
- 🏠 “toe nail” when needed.

# Blocking cont.

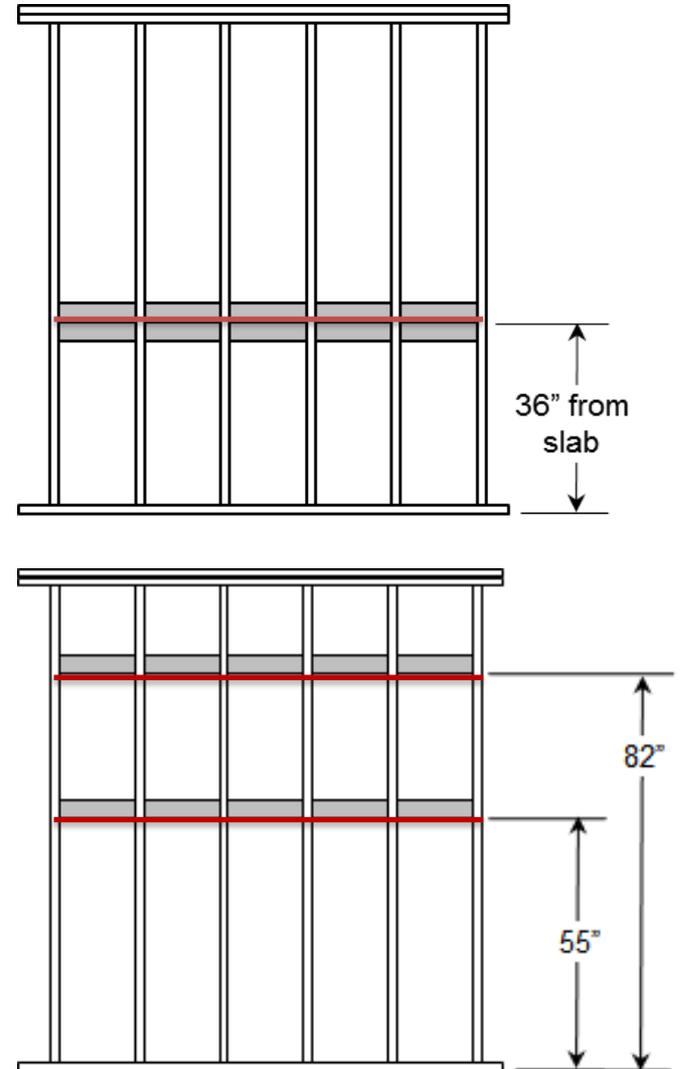

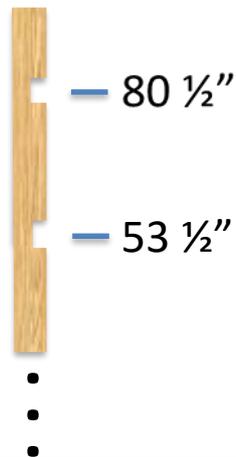

## 🏠 Bathroom

🏠 Jig cut to 31" helps install

## 🏠 Kitchen

🏠 Jigs cut at 53 ½" and 80 ½"

## 🏠 Simple jig:

# HVAC Closet

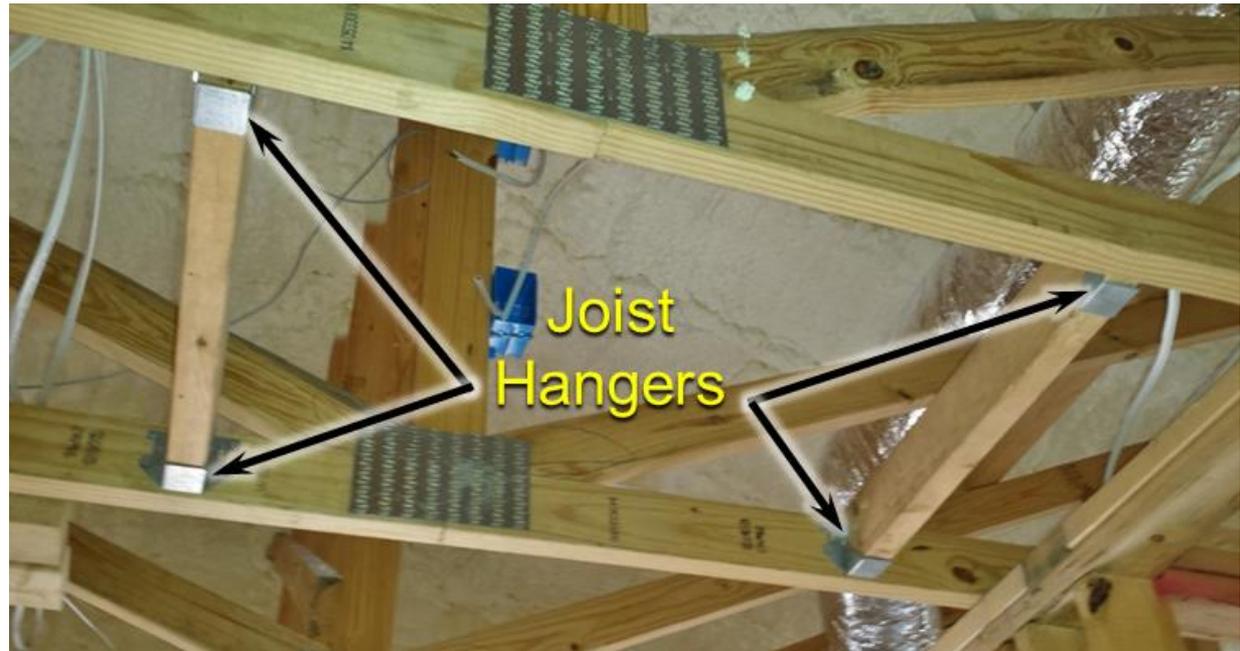

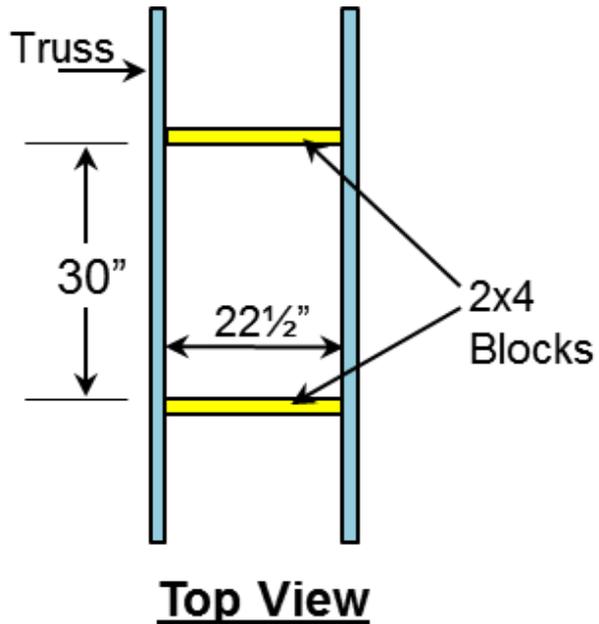

- 🏠 Do not install until after walls are strung and braced.
- 🏠 Prior to sheathing, be sure there are studs for nailers on all corners.
- 🏠 Don't rest OSB on ground
- 🏠 Do not nail down deck, install before trusses go up.
- 🏠 Caulk vertical and horizontal seams under the ledger boards

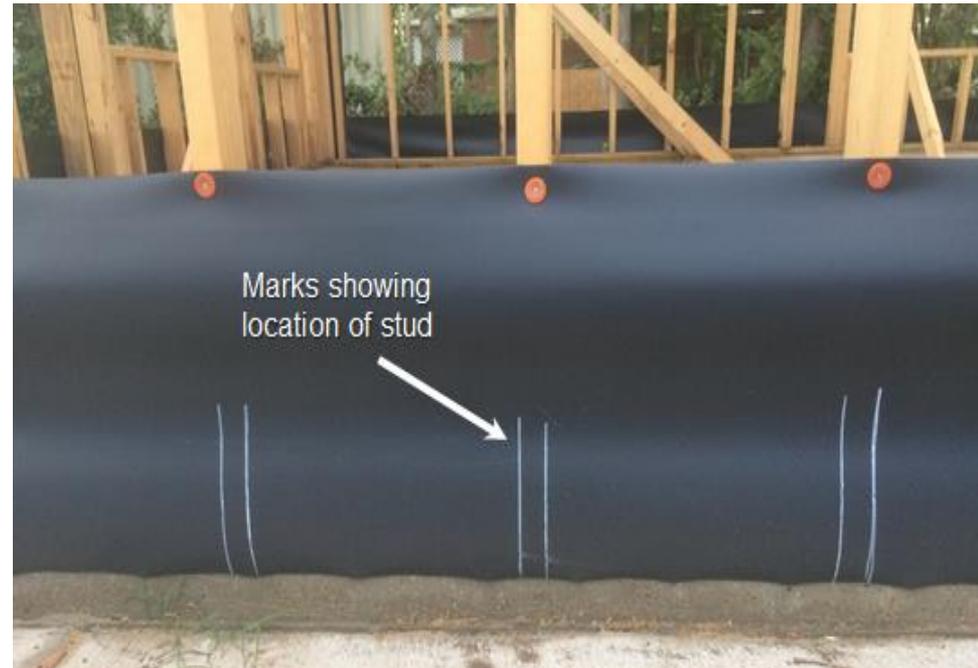

- 🏠 On walls parallel to trusses
- 🏠 non-finger jointed wood at least 12in long
- 🏠 Nail every 8-12"; use at least 3 nails
- 🏠 No more than 3 inches between pieces.
- 🏠 Cover corners

# Attic Access

# Marking stud locations

- 🏠 Mark cap plate and polybarrier
- 🏠 Mark over blue board
- 🏠 Used for nail placement for brick ties/siding

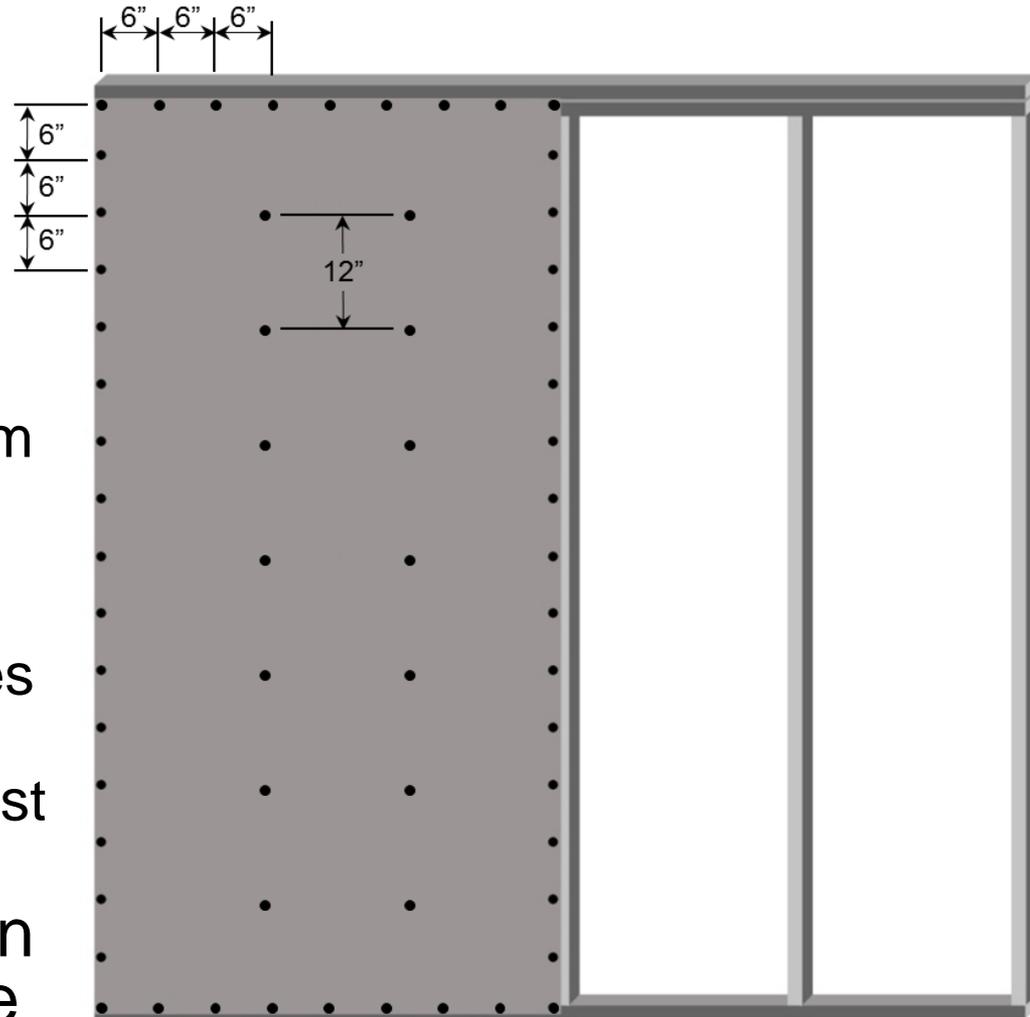

# Marking stud locations/OSB guide

- 🏠 Measure 1" from top of cap plate on the corner of exterior walls
- 🏠 Snap a line
- 🏠 12d nail on center of each stud on the chalk line
- 🏠 Don't pull nails\*

# Sheathing

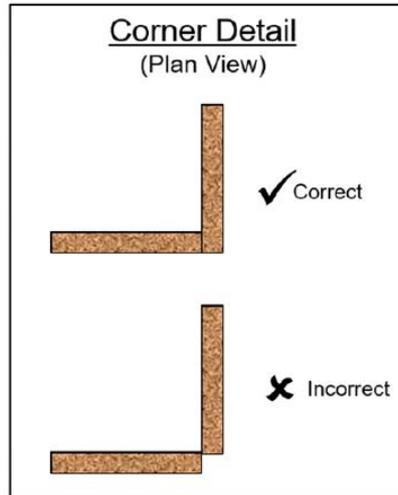

- 🏠 Sheathing walls:
  - 🏠 Installed vertically
  - 🏠 Start with full sheet from the corner
  - 🏠 8d nails no more than every 6 inches on perimeter and 12 inches in field
  - 🏠 Do not allow OSB to rest on slab at porches
- 🏠 Place 8d nails between panels to create space

# Sheathing Walls – Shear Walls

Figure 6-1. Use Full Sheets of Sheathing at Corners

🏠 Full panels on all shear walls:

- 🏠 All corners
- 🏠 garage wall
- 🏠 front door

# Sheathing gables

- 🏠 All sheathing installed vertically
- 🏠 Measure king post from bottom of the gable to the peak
- 🏠 Transfer measurement over to OSB using correct pitch.
- 🏠 8d nails, no more than every 6" on perimeter and 12" in the field
- 🏠 Repeat on successive sheets

Gabled End Truss

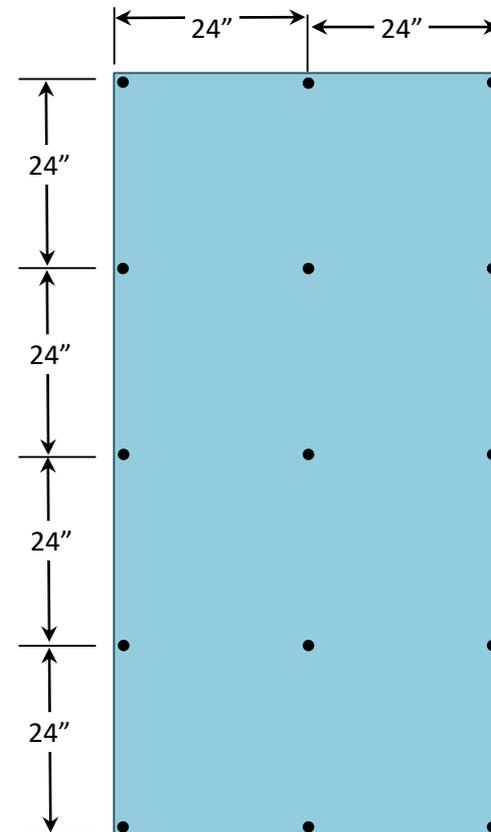

# Blue board/Wrap Porch Gable

## 🏠 Blue board

- 🏠 Install vertically
- 🏠 Letters facing out and up
- 🏠 Off-set blue board by 2' from sheathing seam, do not install seam on seam.
- 🏠 Use roofing nails
- 🏠 3 columns of 5 nails
- 🏠 Nail 2" from edges, leave room for tape

## 🏠 Housewrap

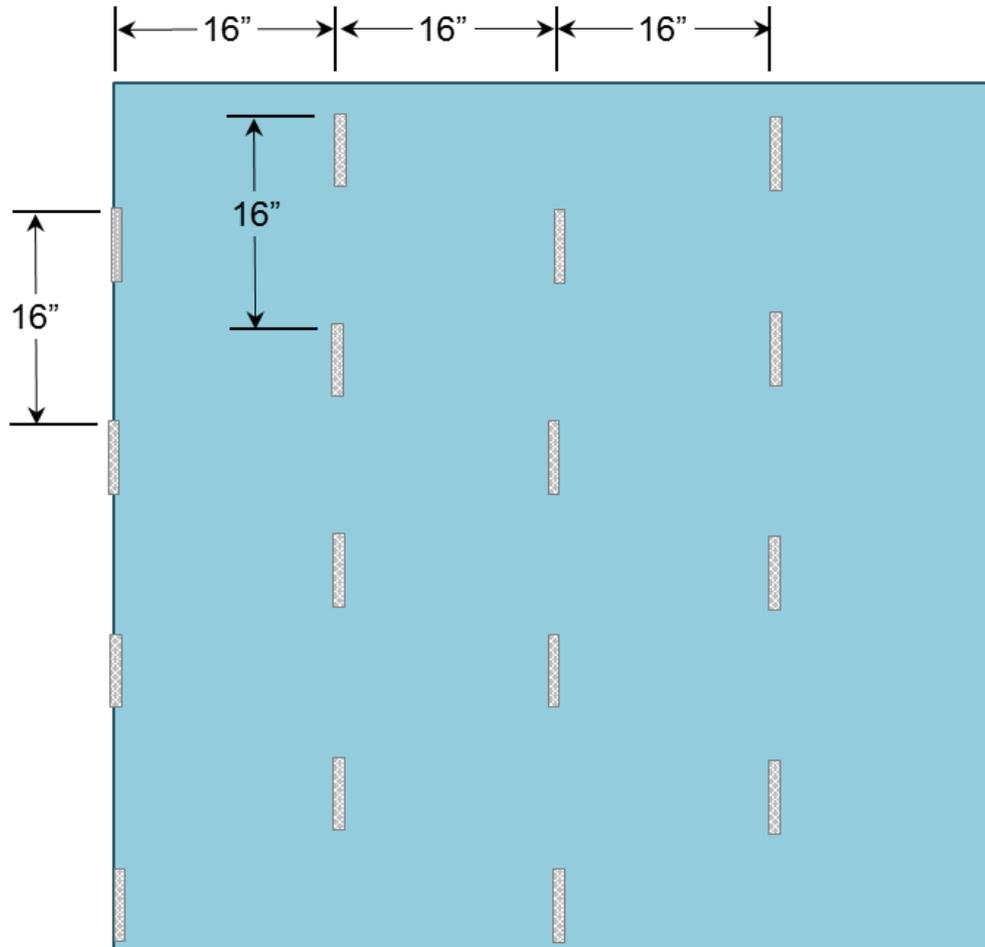

- 🏠 Secure with button caps

# Brick ties

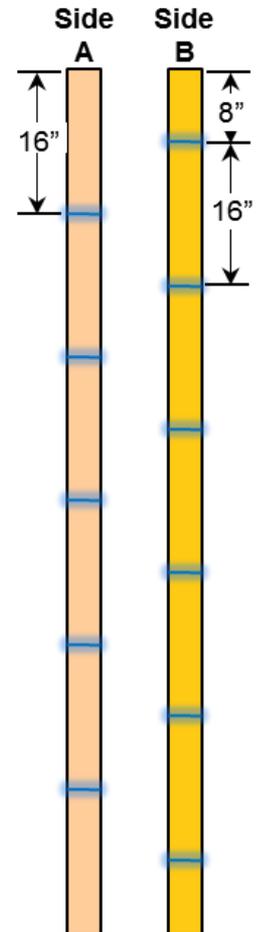

Attach to wall with an 8d nail in the top hole

\*Nail into studs

## "Story Board"

# Questions?

# Wall Issues/Solutions:

## 🏠 Wall is short

- 🏠 DO NOT assume snap lines are correct.
- 🏠 Verify wall/bottom plate or top plate is short compared to floorplan.
- 🏠 If wall is 1/2" short, add OSB spacers on either end of wall.
- 🏠 Do not add shims at the corner or end of wall.
- 🏠 Be sure to rip cut OSB less than wall width, typically 3"
- 🏠 Nail to wall using either 8d or 2" roofing nails every foot.
- 🏠 If wall is 1/4" short, install wall

# Wall issues/solutions: cont.

## 🏠 Wall is long

- 🏠 Verify wall/top plate/bottom plate is long

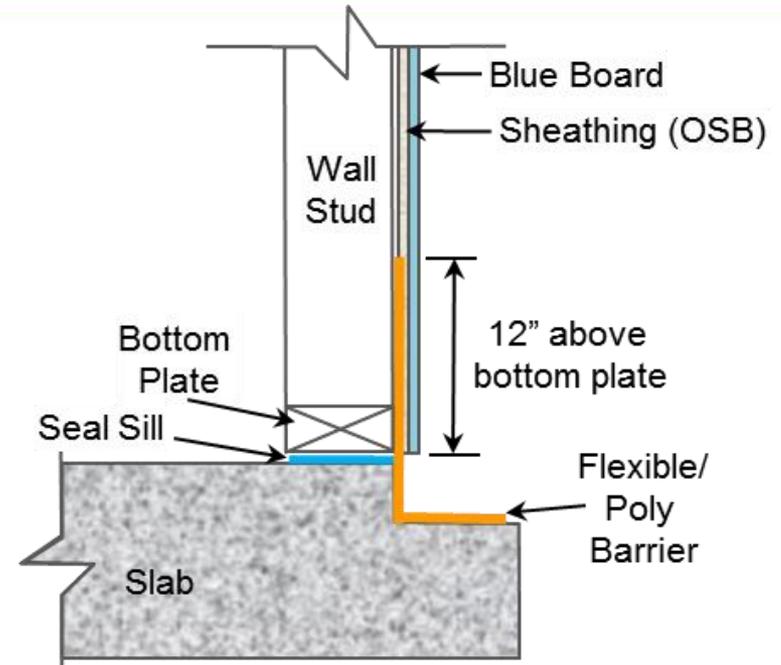

- 🏠 If wall is  $\frac{1}{2}$ " long or less

  - 🏠 knock stud into place.

- 🏠 If wall is longer than  $\frac{1}{2}$ "

  - 🏠 measure length to cut, remove end component, cut each plate and replace component then install wall.

# Brick Flashing

**Bricked Wall**

Wrap poly around  
bricked corners
